Standards for the Management of Chemical Components of Raw Materials

1. Purpose

The TOPPAN Group positions the TOPPAN Group Declaration on the Global Environment as the foundation of its approach to environmental conservation activities. In order to fulfill its sustainability promotion activities, it consistently implements appropriate companywide measures to address global environmental issues.

The TOPPAN Group believes that the management of chemical substances requires the management of each process in the supply chain, starting with raw materials. Therefore, as part of activities to promote sustainability, in addition to chemical substances in raw materials procured by the TOPPAN Group being managed comprehensively within the TOPPAN Group, these Standards for the Management of Chemical Components of Raw Materials have been devised to be observed by the TOPPAN Group's suppliers.

2. Scope of application

These standards are applicable to all raw materials procured by TOPPAN Group bases in Japan (including the raw materials of products and materials used for manufacturing) as well as materials shipped with products, and products shipped without processing, but in cases in which divisions or business fields have their own procurement standards, individual specifications, or requirements, such standards, specifications, or requirements take precedence.

The following procured items are excluded from the scope of application.

* 1: Raw materials stipulated by customers and chemical substances used only inside the TOPPAN Group for research and development.

(These standards are applicable to raw materials if they are provided to outside parties, even if they are used for research and development)

*2: Molds, jigs, tools, machinery, and other equipment that never come into direct contact with products.

*3: Chemicals and other substances used in processes that do not remain in products.

3. Requirements for suppliers

I: Establishment of environmental management system and chemical substance management system

II: Observance of Standards for the Management of Chemical Components of Raw Materials

(1) Classification

The TOPPAN Group stipulates chemical substances to be managed by the TOPPAN Group based on chemSHERPA^{*1} reference lists on substances to be managed (including RoHS directive^{*2}, REACH regulations^{*3}, IEC 62474^{*4}, USA TSCA^{*5}, laws related to chemical substance audits and manufacturing regulations), Japanese labor health and safety laws, and laws on the control of poisonous and deleterious substances, laws and regulations related to nuclear reactors, food hygiene laws, and other legislation.

These substances are divided into the following two types and shown in tables 1 and 2.

Prohibited Substances: Substances that must not be contained in raw materials to be procured.

Table 1 (For "Prohibited Substances" for which threshold values are set in

Table 1, the content must be less than the threshold value. When "Prohibited Substances" are present in quantities less than the threshold value, they must not have been intentionally added. In the case of Japan, if it is permitted for a substance that is a by-product to not be handled as a Class I Specified Chemical Substance, based on reporting in accordance with the BAT*⁶ principle of the Chemical Substances Control Law, such substance is not treated as a "Prohibited Substance". Or, if use of a chemical substance that is a by-product is permitted outside Japan under the laws of the respective country, it is not treated as a "Prohibited Substance".)

However, if a chemical substance falls under any of the exemptions from laws and regulations, it shall be excluded from the list of "Prohibited Substances," but in such cases discussions will be held as necessary and its usage will be monitored. In addition, the use of "Prohibited Substances" for which alternative substances are being developed and plans are being made to switch to alternative substances may be allowed for a certain period of time (exemption) if there is a legal basis for such use and discussions are held, taking into consideration the development and replacement plans, intended use, management system for use, and other relevant factors.

The exempted uses of the approved substances are specified in Table 2.

Substances other than those listed in Table 1 whose manufacture or use is prohibited by domestic laws and regulations, are treated as "Prohibited Substances".

Managed Substances: Substances present in raw materials procured for which concentration present and location must be known. Use is permitted but reduction of amount and replacement with alternatives are recommended.

Table 2

Under these standards, amount present must be disclosed if the concentration of a chemical substance present in raw materials exceeds the threshold value.

*1 chemSHERPA: Common scheme for conveying information about chemical substances present in products (Chemical Information Sharing and Exchange under Reporting Partnership in Supply Chain)

chemSHERPA reference list on substances to be managed: Available for download via the link below:

<https://chemsherpa.net/tool#declarable>

*2 RoHS: Directive on the Restriction of the Use of Certain Hazardous Substances in Electrical Equipment

*3 REACH: Registration, Evaluation, Authorization and restriction of Chemicals

*4 IEC: International Electrotechnical Commission

*5 TSCA: Toxic Substance Control Act

*6 BAT: Best Available Technology/Techniques

*6: Identification methods are provided in section 3-(4) below.

*7: Applicable chemical substances are shown by group. Please see Appendix 1 (Tables A to AI) for details.

*8: For packaging, the total concentration of cadmium, lead, mercury, and hexavalent chrome present must be less than 100 ppm, in accordance with the Directive 94/62/EC on Packaging and Packaging Waste.

*9: See Appendix 2 for exempted items.

*10: One or more of 24 types of specific amines must not be detected in amounts exceeding the threshold.

*11: The threshold by weight of tin is used.

*12: Set at 0.5 ppm for toys and childcare articles.

*13: Applicable to substances containing 0.1% or more of Michler's ketone (EC No. 202-027-5) or Michler's base (EC No. 202-959-2).

*14: Typical alternative names are shown in brackets () but there may be other names used for some of the substances (the same applies to Appendix 1).

*15: Some substances have different numbers (the same applies to Appendix 1).

*16: Fibers included under index number 650-017-00-8 in Annex VI, Part 3, Table 3.2 of EC

No 1272/2008 that fulfill the following three conditions.

- a) The substance concerned is the main component.
- b) The value of the length weighted geometric mean diameter of the fiber minus double its standard error is no more than 6µm.
- c) The content ratio by weight of alkaline oxides and oxides of alkaline-earth metals ($\text{Na}_2\text{O}+\text{K}_2\text{O}+\text{CaO}+\text{MgO}+\text{BaO}$) is no more than 18%.

*17: Individually or in any combination, the total concentration must be less than 0.1 %.

(2) Definitions of terminology

Terminology used in these standards is defined as follows.

• **Threshold**

The maximum allowable value for the concentration of substances present in raw materials.

• **Present/contained/included**

The presence of a chemical substances as constituent or content in a raw material. Even if a substance has not been intentionally added, it is treated as present when it is known that it is present as a chemical substance (impurity) that naturally occurs in the raw material or if it remains as residue during a general industrial refining stage (impurities, residual solvent, unreacted monomers, and other residual matter).

• **Impurity**

Substance that is present in a natural material and cannot be completely removed technically during the refining process as an industrial material, or substance that occurs during a synthesis reaction process and cannot be completely removed technically.

• **Intentional addition**

This refers to the intentional use during the formulation of a raw material or component when continuous inclusion of a substance is desirable to give rise to a specific characteristic, appearance, or quality.

(3) Concentration present

Concentrations present should be reported in units of homogenous material.

Homogenous material is material that cannot be mechanically separated into other materials and has an even overall composition. For example, this includes plastics, ceramics, glass, metals, alloys, paper, board, resins, and coatings. If it is difficult to separate multiple layers and identify the respective concentrations present in each layer, the homogenous unit is deemed to be the smallest unit that is separable.

(4) Identification methods

The following methods are used to identify the concentrations present in units of homogenous material.

No.1: Check that there is no addition.

No.2: Measure using Geiger counter, etc.

No.3: Based on EN 717-1:2004, EN 120:1992, JIS A 5905:2003, JIS A 5908:2003, and JIS A 1460:2001.

No.4: Based on standards (IEC 62321 Ed.1) for testing methods in line with RoHS Directive. Precise analysis methods are shown in Table 3. (When using older analysis methods or other methods for measurement, please confirm with TOPPAN first.)

No.5: Measurement by analysis methods based on ISO 24362:2014, ISO 17234-1:2010, ISO 17234-2:2011, EN 14362:2012, JIS L 1940-1:2014, JIS L 1940-3:2014 or LMBG82.02 (German official method)

- No.6: Analysis method compliant with the Specifications and Standards for Foods and Food Additives, etc. in Ministry of Health and Welfare Notification No. 370 and the standards for plastic containers/packages stipulated in the Ministerial Ordinance on Milk and Milk products Concerning Compositional Standards, etc. (Ministry of Health and Welfare ordinance No. 52).
- No.7: Calculated from raw material of supplier using Safety Data Sheet (SDS), etc. Identify maximum value.
- No.8: Analysis method for food packaging compliant with the Specifications and Standards for Foods and Food Additives, etc. in Ministry of Health and Welfare Notification No. 370 and the standards for plastic containers/packages stipulated in the Ministerial Ordinance on Milk and Milk products Concerning Compositional Standards, etc. (Ministry of Health and Welfare ordinance No. 52). Analysis method for toys and products for babies and infants compliant with European standard EN 71-3 specifying safety requirements for toys. Threshold values for the above should be based on respective specifications and standards stipulated in related regulations.
- No.9: Refer to JIS L 1041 : 2011
- No.10: In the case of toys and products for babies and infants, refer to the appendix of Ministry of Health and Welfare Notification on food safety 0906 vol. 4. For other items refer to IEC 62321 part 8
- No.11: Measured using analysis method compliant with GS2014:01PAK (German official method)

(5) Handling in light of Japanese laws/regulations and EU SVHC additions.

Until the revision of these standards, if a substance is newly designated as one whose manufacture or use is prohibited under amendments of Japanese laws and regulations, it shall be treated as a Prohibited Substance.

If a substance of very high concern (SVHC; substance on Candidate list^{*18}) in the EU's REACH regulation is added, it shall be treated as a "Managed Substance" (as a basic rule the threshold value will be 1,000 ppm, and the identification method used will be ⑦ above).

*18: Refer to <https://echa.europa.eu/candidate-list-table>.

Dioctyltin dilaurate	3648-18-8
Dioctyltin dilaurate, stannane, dioctyl-, bis(coco acyloxy) derivs., and any other stannane, dioctyl-, bis(fatty acyloxy) derivs. wherein C12 is the predominant carbon number of the fatty acyloxy moiety	-
Other Dioctyltin compounds	-

Table AI 4,4'-Oxydianiline and its salts

4,4'-Oxydianiline and its salts	CAS RN
4,4'-Oxydianiline	101-80-4
4,4'-Oxydianiline salts	-

Table AJ Benzotriazole compounds

Benzotriazole compounds	CAS RN
2,4-Di-tert-butyl-6-(5-chlorobenzotriazol-2-yl)phenol (UV-327)	3864-99-1
2-(2H-Benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350)	36437-37-3

Table AK Perfluorinated fatty acids and their salts
(Excluding Prohibited Substances)

Perfluorinated fatty acids and their salts (Excluding Prohibited Substances)	CAS RN
Perfluorobutanesulfonic acid (nonafluorobutanesulfonic acid; PFBS)	375-73-5
PFBS salts	-
Heptadecafluorononanoic acid sodium salt	21049-39-8
Heptadecafluorononanoic acid ammonium salt	4149-60-4
Nonadecafluorodecanoic acid sodium salt	3830-45-3
Nonadecafluorodecanoic acid ammonium salt	3108-42-7

Table AL Polycyclic aromatic hydrocarbones

Polycyclic aromatic hydrocarbones [category A]	CAS RN
Chrycene	218-01-9
Benz[a]anthracene	56-55-3
Benzo[ghi]perylene	191-24-2
Benzo[k]fluoranthene	207-08-9
Polycyclic aromatic hydrocarbones [category B]	CAS RN
Benzo[a]pyrene	50-32-8
Benzo[e]pyrene	192-97-2
Benzo[b]fluoranthene	205-99-2
Benzo[j]fluoranthene	205-82-3
Dibenz[a,h]anthracene	53-70-3
Polycyclic aromatic hydrocarbones [category C]	CAS RN
Fluoranthene	206-44-0
Phenanthrene	85-01-8
Pyrene	129-00-0

Table AM Cyclic siloxanes

Cyclic siloxanes	CAS RN
Octamethylcyclotetrasiloxane (D4)	556-67-2
Decamethylcyclopentasiloxane (D5)	541-02-6
Dodecamethylcyclohexasiloxane (D6)	540-97-6

Appendix 2 Typical exemption items

No.	Substance names	Exemption items
15	Cadmium and its compounds	• filter glasses and glasses used for reflectance standards • electrical contacts • Quantum dot materials. However, use must have a legal basis and meet relevant stipulations, including the RoHS directive.
18	Lead and its compounds	• steel for machining purposes and in galvanized steel containing up to 0.35 % lead by weight • aluminium containing up to 0.4 % lead by weight • Copper alloy containing up to 4 % lead by weight • high melting temperature type solders (i.e. lead-based alloys containing 85 % by weight or more lead) • white glasses used for optical applications • filter glasses and glasses used for reflectance standards • solders to complete a viable electrical connection between semiconductor die and carrier within integrated circuit flip chip packages

(NOTE 1)

In addition to Appendix 2, uses exempt from 2011/65/EU (Annex III, IV) are also exempt.

(NOTE 2)

Exemptions for each product are valid until the deadline specified in 2011/65/EU.
